REPORT SUMMARY

EMC Testing of the
SRT Marine Technology Ltd
AtoN TRS-418-0003

1.1 INTRODUCTION

The information contained in this report is intended to show verification of the SRT Marine Technology Ltd, AtoN TRS-418-0003 to the requirements of IEC 60945: C1 2008.

Objective	To perform Electromagnetic Compatibility (EMC) Qualification Approval Testing to determine the Equipment Under Test's (EUT's) compliance with the Test Specification, for the series of tests carried out.
Manufacturer	SRT Marine Technology Limited
Model Number(s)	TRS-418-0003
Customer Declared Variant(s)	TR-418-0001
Part No(s)	TRS-418-0003 & TR-418-0001
Serial Number(s)	P216FTU-30, P216FTU-39
Software Version	080200.00.09.11
Number of Samples Tested	2
Test Specification/Issue/Date	IEC 60945: C1 2008
Incoming Release Date	Declaration of Build Status 12 October 2012
Order Number Date	POR003047 22 March 2012
Start of Test	09 October 2012
Finish of Test	01 November 2012
Name of Engineer(s)	P Joynson A R Hubbard

1.4 PRODUCT INFORMATION

1.4.1 Technical Description

The Equipment Under Test (EUT) was a SRT Marine Technology Ltd, AtoN TRS-418-0003 as shown in the photograph below. A full technical description can be found in the manufacturer's documentation.

Equipment Under Test (AtoN)

1.4.2 Test Configuration

Configuration 1: EUT

The EUT was powered by a 24V DC supply for all tests with the exception of DC voltage interrupts that was performed at the lower voltage range of 12V DC.

A GPS simulator was used for mode 2. A class A AIS receiver was connected to a laptop to monitor and record all transmission data (AIVDM and AIVDO).

1.4.3 EUT Cable / Port Identification

Port	Max Cable Length specified	Usage	Type	Screened
Power / Data	1.5m	DC / Data	Multi-core	Yes

1.4.4 Modes of Operation

Mode 1 - No GPS signal, waiting to TX

Mode 2 - GPS signal present and TX

1.4.5 Monitoring of Performance

The EUT was monitored via a class A AIS receiver connected to a laptop and all transmission data was recorded.

1.4.6 Performance Criteria

IEC 60945

Performance criterion A: the EUT shall continue to operate as intended during and after the test. No degradation of performance or loss of function is allowed, as defined in the relevant equipment standard and in the technical specification published by the manufacturer.

Performance criterion B: the EUT shall continue to operate as intended after the test. No degradation of performance or loss of function is allowed, as defined in the relevant equipment standard and in the technical specification published by the manufacturer. During the test, degradation or loss of function or performance which is self-recoverable is however, allowed, but no change of actual operating state or stored data is allowed.

Performance criterion C: temporary degradation or loss of function or performance is allowed during the test, provided the function is self-recoverable, or can be restored at the end of the test by the operation of the controls, as defined in the relevant equipment standard and in the technical specification published by the manufacturer.

1.5 TEST CONDITIONS

For all tests the EUT was set up in accordance with the relevant test standard and to represent typical operating conditions. Tests were applied with the EUT situated in a shielded enclosure, test laboratories or an open test area as appropriate.

The EUT was powered from a 24V DC supply.

Test Results

EN 60945, Clause 5.3 states:

The measured test results shall be compared with the corresponding acceptable performance limits and the EUT shall pass the test only if the measured performance margin is favourable and greater than the measurement uncertainty. The test report shall show, for each test measurement, the test result, its associated measurement uncertainty, the acceptable performance limits, and the acceptable performance margin, as applicable.

The tests detailed in this report met the above test requirements.

1.6 DEVIATIONS FROM THE STANDARD

No deviations from the applicable test standards or test plan were made during testing.

1.7 MODIFICATION RECORD

No modifications were made to the EUT during testing.

2.1.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.1.5 Test Method and Operating Modes

The test was applied in accordance with the test method requirements of CISPR 16-1-2.

The test was performed with the EUT in the following configurations and modes of operation:

Configuration 1 - Mode 1
- Mode 2

2.1.6 Environmental Conditions

	12 October 2012	19 October 2012
Ambient Temperature	19.8°C	18°C

2.2.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.2.5 Test Method and Operating Modes

The test was applied in accordance with the test method requirements of IEC 61000-4-6.

The test was performed with the EUT in the following configurations and modes of operation:

Configuration 1 - Mode 1
 - Mode 2

2.2.6 Environmental Conditions

	09 October 2012
Ambient Temperature	21.3°C
Relative Humidity	47%
Atmospheric Pressure	1010mbar

2.2.7 Test Results

For the period of test the EUT continued to operate as intended and therefore met the requirements of IEC 60945 for Immunity to Radio Frequency Common Mode (DC Power Port).

Note that this test was performed using an EM Clamp to the combined Power/Control Cable.

The applied test levels are shown below.

Configuration 1 - Mode 1

2.7.6 Environmental Conditions

11 October 2012

Ambient Temperature 26.5°C

Relative Humidity 45.35 - 45.5%

Atmospheric Pressure 995mbar

2.7.7 Test Results

For the period of test the EUT continued to operate as intended and therefore met the requirements of IEC 60945 for Immunity to Electrostatic Discharge (Enclosure Port).

The applied test levels are shown below.

Key to Results

- ✓ The EUT's performance was not impaired at this test point when the ESD pulse was applied.
- ✓* No discharge occurred at this test point when the ESD pulse was applied.
- N/A Test not applicable as defined in the specification.
