ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC 47 CFR Part 80, FCC 47 CFR Part 2, Industry Canada RSS-182 and ISEDC RSS-GEN. The sample tested was found to comply with the requirements defined in the applied rules.

EXECUTIVE SUMMARY

A sample of this product was tested and found to be compliant with FCC 47 CFR Part 80: 2018, FCC 47 CFR Part 2: 2018, Industry Canada RSS-182: Issue 5 (2012-01) and ISEDC RSS-GEN: Issue 5 Amendment 1 (2019-03) for the tests detailed in section 1.3.

2 Test Details

2.1 Bandwidths

2.1.1 Specification Reference

FCC 47 CFR Part 80, Clause 80.205
FCC 47 CFR Part 2, Clause 2.1049
ISED RSS-GEN, Clause 6.7

2.1.2 Equipment Under Test and Modification State

VMS-100S, S/N: EP2-15 - Modification State 0

2.1.3 Date of Test

02-August-2019

2.1.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.205, Part 2.1049, ISED RSS-GEN Clause 6.6 and ANSI C63.26 clause 5.4.4.

The EUT was transmitting at maximum power, modulated by the standard AIS test signals using PRBS packet payloads. The EUT was connected to a spectrum analyser via a cable and attenuator, the RBW of the spectrum analyser was set to at least 1% of the emission bandwidth and a video bandwidth of 3 times RBW, the occupied bandwidth measurement function of the analyser was used and the 99% bandwidth recorded.

The plots on the following pages show the resultant display from the Spectrum Analyser.

2.1.5 Environmental Conditions

Ambient Temperature 23.1 °C
Relative Humidity 52.6 %

VMS-100S, S/N: EP2-15 - Modification State 0

2.2.3 Date of Test

06-August-2019 to 07-August-2019

2.2.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.209(a) and FCC CFR 47 Part 2.1055 (a)(2), (d)(1).

The EUT was set to transmit on maximum power with an unmodulated carrier on bottom and top channels. The EUT was connected to a frequency counter using an external 10 MHz frequency reference. The difference between the frequency of the fundamental and the frequency of the assigned channel in accordance with the manufacturer's documentation was recorded. In accordance with 2.1055, the temperature was varied from -20°C to +50°C in 10° steps and at 20°C for both minimum and maximum voltage extremes.

VMS-100S, S/N: EP2-15 - Modification State 0

2.3.3 Date of Test

05-August-2019

2.3.4 Test Method

This test was performed in accordance with ANSI C63.26, clause 5.7.

For emissions where the frequency is removed less than 250% of the authorized bandwidth measurements were performed conducted as follows:

The EUT was connected to a spectrum analyser via a cable and attenuator. The path loss between the EUT and analyser was calibrated using a network analyser and entered in to the spectrum analyser as a reference level offset. The reference level for the mask was established with an RBW approximately 2 or 3 times the emission bandwidth. The RBW was then reduced to at least 1% of the emission bandwidth, with a VBW of 3 times RBW. The mask as per FCC CFR 47 Part 80.211 (f) was applied.

For emissions where the frequency is removed more than 250% of the authorized bandwidth measurements were performed both conducted and radiated as follows:

Conducted: A network analyser was used to measure the path loss and the worst case was entered as a reference level offset in to the spectrum analyser. The EUT was connected to a spectrum analyser via an attenuator, filter and cable. Between 300 MHz and 2 GHz a 300 MHz high pass filter was used.

2.3.5 Environmental Conditions

Ambient Temperature	23.3 °C
Relative Humidity	66.9 %

Remark: The limit for the above measurement is -13 dBm

FCC 47 CFR Part 80, Limit Clause 80.211

Within 250% of the Authorised Bandwidth:

On any frequency removed from the assigned frequency by more than 50 percent up to and including 100 percent of the authorized bandwidth: At least 25 dB;

On any frequency removed from the assigned frequency by more than 100 percent up to and including 250 percent of the authorized bandwidth: At least 35 dB

More than 250% of the Authorised Bandwidth:

On any frequency removed from the assigned frequency by more than 250 percent of the authorized bandwidth: At least 43 plus $10\log_{10}$ (mean power in watts) dB.

Industry Canada RSS-182, Limit Clause 7.9.1

On any frequency removed from the carrier frequency by more than 50%, but not more than 100% of the authorized bandwidth: at least 25 dB, measured with a bandwidth of 300 Hz.

On any frequency removed from the carrier frequency by more than 100%, but not more than 250% of the authorized bandwidth: at least 35 dB, measured with a bandwidth of 300 Hz.

On any frequency removed from the carrier frequency by more than 250% of the authorized bandwidth: at least $43 + 10 \log_{10} p(\text{watts})$ dB, measured with a bandwidth of 30 kHz.

2.3.7 Test Location and Test Equipment Used

2.4.2 Equipment Under Test and Modification State

VMS-100S, S/N: EP2-15 - Modification State 0

2.4.3 Date of Test

10-September-2019

2.4.4 Test Method

This test was performed in accordance with ANSI C63.26, clause 5.5.

Pre-scans were performed using the Direct Field Strength method. Any emissions found to be within 10dB of the specification limit were formally measured using the Direct Field Strength method.

The rule part limit of -13dBm was converted to a field strength limit using equation c) in ANSI C63.26 clause 5.2.7

$E \text{ (dBuV/m)} = \text{EIRP (dBm)} - 20\log(D) + 104.8$ where D is the measurement distance.

For a measurement distance of 3 m:

$E \text{ (dBuV/m)} = -13 - 20\log(3) + 104.8 = 82.2\text{dBuV/m}$.

This limit line is found on the pre-scan plots.

The EUT was set to transmit on maximum power with both Tx1 and Tx2 operating in turn.

For any emissions found the EUT was then removed from the chamber and replaced with a substitution antenna. Using a signal generator, the level was adjusted to achieve the same value on the measuring instrument as previously recorded with the EUT. The final result was determined by a calculation using the signal generator level, antenna gain and cable loss.

2.5.3 Date of Test

05-August-2019

2.5.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.213(d).

The EUT was transmitting at maximum power, modulated by the standard AIS test signals using PRS packet payloads. The EUT was connected to a spectrum analyser via a cable and attenuator, using the FM demodulation function of the spectrum analyser, the peak frequency deviation was observed and shown in the plots on the following pages.

FCC 47 CFR Part 80, Limit Clause 80.213

Radiotelephone transmitters using A3E, F3E and G3E emission must have a modulation limiter to prevent any modulation over 100 percent.

Industry Canada RSS-182, Limit Clause 7.7

The VHF AIS equipment shall comply with the following characteristics.

Transmitter frequency: 161.975 MHz (channel 87B)
162.025 MHz (channel 88B)
Channel spacing: 25 kHz or 12.5 kHz
Modulation scheme: GMSK/FM
Modulation index: 0.5 max. for 25 kHz channel spacing
0.25 max. for 12.5 kHz channel spacing
Transmission rate: 9600 bps

2.5.7 Test Location and Test Equipment Used

This test was carried out in RF Laboratory 1.

VMS-100S, S/N: EP2-15 - Modification State 0

2.6.3 Date of Test

05-August-2019

2.6.4 Test Method

The test was applied in accordance with the ANSI C63.26, clause 5.2.3.3.

The EUT was set to transmit on maximum power in turn on either AIS channel. The EUT was modulated using the standard AIS test signal with PRBS packet payload. The EUT was connected to a spectrum analyser via a cable and attenuator. The path loss was measured using a network analyser and entered as a reference level offset in the spectrum analyser. The RBW of the spectrum analyser was set to 100 kHz and the video bandwidth to 300 kHz with the trace set to max hold using a peak detector and the result was recorded.

2.7.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.217(b) and ANSI C63.26, clause 5.7.

A network analyser was used to measure the path loss and the worst case was entered as a reference level offset in to the spectrum analyser for each frequency range of interest. The EUT was connected to a spectrum analyser via a cable and attenuator. The EUT was configured in a receive only state. The spectrum analyser settings were configured with an RBW of 100 kHz below 1 GHz and 1 MHz for frequencies greater than 1 GHz using a VBW of 3 times the RBW. The trace set to max hold using a peak detector and the plots recorded as shown.

2.7.5 Environmental Conditions

Ambient Temperature 23.3 °C
Relative Humidity 66.9 %
